Adidas Annual Report 2025

A SQL analysis of regional growth, currency effects, channel mix and margins

Seven business questions answered in PostgreSQL, comparing 2024 and 2025 from the annual report tables.

Techniques: LAG, RANK, PARTITION BY, SUM() OVER, POWER, FILTER, CASE

Swipe for the questions and results. The full SQL is in the appendix.

APPROACH

How the data was built and checked

Annual report tables were loaded into PostgreSQL and checked against each other before any analysis.

Step	What happened
Source	Note 36 (segment information), the segment pages of the Financial Review and the income statement channel table, all from the Annual Report 2025.
Staging	Raw figures went into text-only staging tables, so nothing was rejected for formatting.
Cleaning	A clean_num() function converted report-style text such as 5,087, (12) and (0) into numbers.
Fact tables	Typed tables keyed by source report year, fiscal year and segment, so restated figures can be told apart.
Check 1	Segment sales plus HQ/Consolidation reconcile to group net sales (gap of 51 in 2025, 31 in 2024 against 32 reported, a rounding difference).
Check 2	Operating margin recalculated from Note 36 matched the margin reported in the Financial Review for all 12 segment-year pairs.

Figures are in EUR millions unless stated. Growth compares 2025 with 2024, the two years available in the 2025 report.

QUESTION 1

LAG, POWER

How fast did group net sales grow, and what was the compound annual growth rate?

Group net sales grew 4.8% in euros, but 10% on a currency-neutral basis.

Fiscal year	Net sales	Prior year	Change	Reported growth	Currency-neutral growth
2024	23,683	n/a	n/a	n/a	12%
2025	24,811	23,683	1,128	4.8%	10%

About five percentage points of growth were lost to currency movements.

With one year between the endpoints the compound annual growth rate equals simple growth: 4.76% for 2024 to 2025. A multi-year rate needs 2023, which is in the 2024 annual report.

QUESTION 2

RANK() OVER, PARTITION BY

Which regions grew fastest, and did the ranking change?

Europe grew fastest in euros. Latin America grew fastest in local currency.

Region	Reported growth	Rank	Currency-neutral	Rank
Europe	7.7%	1	8%	5
Emerging Markets	6.0%	2	15%	2
Latin America	5.6%	3	21%	1
Japan/South Korea	5.0%	4	11%	3
Greater China	4.7%	5	9%	4
North America	-0.8%	6	4%	6

Ranking by sales size was identical in 2024 and 2025: Europe, North America, Greater China, Emerging Markets, Latin America, Japan/South Korea. Growth can be ranked for 2025 only, because the data starts at 2024.

QUESTION 3

SUM() OVER (PARTITION BY)

What share of sales does each region contribute, and has the mix shifted?

The mix barely moved: North America lost 1.1 points, Europe gained 0.9.

Segment	2024 share	2025 share	Shift (pp)
Europe	31.9%	32.9%	+0.93
North America	21.7%	20.5%	-1.14
Greater China	14.6%	14.6%	+0.01
Emerging Markets	14.0%	14.2%	+0.18
Latin America	11.7%	11.8%	+0.10
Japan/South Korea	5.7%	5.7%	+0.02
Other Businesses	0.4%	0.3%	-0.10

Shares are measured against the seven segments combined (EUR 24,760m in 2025), which excludes HQ/Consolidation of EUR 51m. All figures are reported euros.

QUESTION 4

ORDER BY, RANK()

Which region added the most euros, as opposed to the highest percentage growth?

Europe added EUR 585m, nearly three times any other region.

Region	2024	2025	Added (EUR m)	Growth	Rank by %
Europe	**7,551**	**8,136**	**585**	**7.7%**	**1**
Emerging Markets	3,310	3,510	200	6.0%	2
Greater China	3,459	3,623	164	4.7%	5
Latin America	2,772	2,926	154	5.6%	3
Japan/South Korea	1,339	1,406	67	5.0%	4
North America	5,128	5,087	-41	-0.8%	6

The two measures disagree in the middle. Greater China is third by euros but fifth by percentage because of its large base. Latin America is the reverse.

QUESTION 5

CASE, column arithmetic

How large is the gap between reported and currency-neutral growth?

Currency erased about three quarters of Latin America's growth in euros.

Region	Reported	Currency-neutral	Gap (pp)	Currency drag
Latin America	**5.6%**	**21%**	**15.4**	**Large**
Emerging Markets	6.0%	15%	9.0	Moderate
Japan/South Korea	5.0%	11%	6.0	Moderate
North America	-0.8%	4%	4.8	Small
Greater China	4.7%	9%	4.3	Small
Europe	7.7%	8%	0.3	Small

Reported growth is calculated from the euro figures. Currency-neutral growth is the rounded whole-percentage figure from the report, so each gap could be off by up to half a point. The Large, Moderate and Small bands (10 and 5 points) are my own cut-offs.

QUESTION 6

Conditional aggregation, LAG

Is the channel mix moving?

No. Wholesale held at 60% of sales and direct-to-consumer at 40%.

Measure	2024	2025
Wholesale net sales (EUR m)	14,172	14,833
Direct-to-consumer net sales (EUR m)	9,490	9,931
Wholesale share of net sales	59.8%	59.8%
Direct-to-consumer share	40.1%	40.0%
Wholesale growth	n/a	4.7%
Direct-to-consumer growth	n/a	4.6%

Channel figures were keyed from the annual report income statement page, because the downloadable workbooks do not contain them. Shares use group net sales as the denominator and sum to 99.8% because the report notes items not directly attributable to a channel. Currency-neutral growth was 10% for wholesale and 9% for direct-to-consumer.

QUESTION 7

LAG, RANK() OVER, CASE

Which regions are the most profitable, and is margin improving?

Greater China earns the highest margin. Europe earns the most profit.

Region	Op. profit	Op. margin	Change (pp)	Trend	Gross margin	Change (pp)
Greater China	802	22.1%	+1.5	Improving	52.6%	+3.0
Japan/South Korea	305	21.7%	-0.3	Declining	52.6%	-0.5
Europe	1,692	20.8%	+1.1	Improving	51.6%	+1.3
Latin America	609	20.8%	-1.4	Declining	47.5%	-0.4
Emerging Markets	701	20.0%	-2.3	Declining	50.8%	-0.5
North America	544	10.7%	+1.3	Improving	45.4%	+2.3

Margins improved in three regions and declined in three. The three fastest currency-neutral growers (Latin America, Emerging Markets, Japan/South Korea) all lost margin. North America's margin is about half that of every other region. Margin changes use margins rounded to one decimal.

SUMMARY

What the numbers say

Strong growth in local currency, softer in euros, with a stable mix.

Question	Answer
1. Group growth	4.8% reported, 10% currency-neutral
2. Fastest region	Europe in euros, Latin America in local currency
3. Mix shift	North America -1.1 pp, Europe +0.9 pp
4. Most euros added	Europe, EUR 585m
5. Widest currency gap	Latin America, 15.4 points
6. Channel mix	Stable at 60% wholesale, 40% direct-to-consumer
7. Profitability	Greater China highest margin, Europe highest profit

What this analysis does not show

Two years of data support comparisons, not trends.

The 2025 report carries 2025 and 2024 only. A compound annual growth rate over several years, and a growth ranking for each year, need 2023 figures from the 2024 annual report. The tables are keyed by source report year so that data can be added without overwriting.

Growth percentages published in the segment tables are rounded to whole numbers, and margin changes are calculated from margins rounded to one decimal, so differences of up to one point are rounding.

All euro figures are reported figures and include currency effects, which is why the currency-neutral comparison matters.

Segment totals exclude HQ/Consolidation, and the 2024 figures in the 2025 report are adjusted for a reclassification related to Other Businesses.

Next steps: load 2023, add the footwear, apparel and accessories split by region, and test whether margin changes follow operating expense growth.

Setup: number-cleaning function

```
CREATE OR REPLACE FUNCTION clean_num(t text)
RETURNS numeric
LANGUAGE sql
IMMUTABLE
AS $$
    SELECT CASE
        WHEN t IS NULL OR btrim(t) IN ('', '-', '–') THEN NULL
        WHEN btrim(t) ~ '^\([0-9.,]+\)$'
            THEN -(translate(btrim(t), '(),', '')::numeric)
        ELSE replace(
                 translate(btrim(t), ',' || chr(160) || ' ', ''),
                 '–', '-')::numeric
    END
$$;
```

Check: operating margin calculated vs reported

```
SELECT m.fiscal_year, m.segment_name,
       ROUND(op.value_eur_m / ns.value_eur_m, 3) AS op_margin_calculated,
       m.operating_margin                        AS op_margin_reported
FROM fact_segment_margins m
JOIN fact_segment_metrics ns
  ON ns.source_report_year = m.source_report_year
 AND ns.fiscal_year = m.fiscal_year
 AND ns.segment_name = m.segment_name
 AND ns.metric = 'net_sales'
JOIN fact_segment_metrics op
  ON op.source_report_year = m.source_report_year
 AND op.fiscal_year = m.fiscal_year
 AND op.segment_name = m.segment_name
 AND op.metric = 'operating_profit'
WHERE ROUND(op.value_eur_m / ns.value_eur_m, 3) <> m.operating_margin
ORDER BY m.fiscal_year, m.segment_name;
```

Q1a. Group net sales growth each year [LAG]

```
WITH grp AS (
    SELECT fiscal_year, value_eur_m AS net_sales
    FROM fact_reconciliation
    WHERE source_report_year = 2025
      AND measure = 'net_sales'
      AND line_item = 'Total net sales'
)
SELECT g.fiscal_year,
       g.net_sales,
       LAG(g.net_sales) OVER (ORDER BY g.fiscal_year) AS prior_year_sales,
       g.net_sales - LAG(g.net_sales) OVER (ORDER BY g.fiscal_year) AS change_eur_m,
       ROUND((g.net_sales / LAG(g.net_sales) OVER (ORDER BY g.fiscal_year) - 1) * 100, 1) AS reported_growth_pct,
       ROUND(k.value * 100) AS currency_neutral_growth_pct
FROM grp g
LEFT JOIN fact_group_kpi k
       ON k.fiscal_year = g.fiscal_year
      AND k.source_report_year = 2025
      AND k.metric = 'net_sales_growth_currency_neutral'
ORDER BY g.fiscal_year;
```

Q1b. Compound annual growth rate, 2024 to 2025 [POWER]

```
WITH ends AS (
    SELECT MAX(value_eur_m) FILTER (WHERE fiscal_year = 2024) AS sales_start,
           MAX(value_eur_m) FILTER (WHERE fiscal_year = 2025) AS sales_end
    FROM fact_reconciliation
    WHERE source_report_year = 2025
      AND measure = 'net_sales'
      AND line_item = 'Total net sales'
)
SELECT sales_start,
       sales_end,
       2025 - 2024 AS years,
       ROUND((POWER(sales_end / sales_start, 1.0 / (2025 - 2024)) - 1) * 100, 2) AS cagr_pct
FROM ends;
```

Q2a. Ranking by sales size in each year [RANK, PARTITION BY]

```
SELECT m.fiscal_year,
       m.segment_name,
       m.value_eur_m AS net_sales,
       RANK() OVER (PARTITION BY m.fiscal_year ORDER BY m.value_eur_m DESC) AS size_rank
FROM fact_segment_metrics m
JOIN dim_segment d ON d.segment_name = m.segment_name
WHERE m.metric = 'net_sales'
  AND m.source_report_year = 2025
  AND d.is_geographic
ORDER BY m.fiscal_year, size_rank;
```

Q2b. Growth ranking 2025, reported vs currency-neutral [RANK]

```
WITH sales AS (
    SELECT m.segment_name,
           MAX(m.value_eur_m) FILTER (WHERE m.fiscal_year = 2024) AS sales_2024,
           MAX(m.value_eur_m) FILTER (WHERE m.fiscal_year = 2025) AS sales_2025
    FROM fact_segment_metrics m
    JOIN dim_segment d ON d.segment_name = m.segment_name
    WHERE m.metric = 'net_sales'
      AND m.source_report_year = 2025
      AND d.is_geographic
    GROUP BY m.segment_name
)
SELECT s.segment_name,
       ROUND((s.sales_2025 / s.sales_2024 - 1) * 100, 1) AS reported_growth_pct,
       RANK() OVER (ORDER BY s.sales_2025 / s.sales_2024 DESC) AS rank_reported,
       ROUND(g.net_sales_chg_currency_neutral * 100) AS currency_neutral_pct,
       RANK() OVER (ORDER BY g.net_sales_chg_currency_neutral DESC) AS rank_currency_neutral,
       RANK() OVER (ORDER BY s.sales_2025 / s.sales_2024 DESC)
         - RANK() OVER (ORDER BY g.net_sales_chg_currency_neutral DESC) AS places_gained_after_currency_adj
FROM sales s
JOIN fact_segment_growth g
  ON g.segment_name = s.segment_name
 AND g.source_report_year = 2025
ORDER BY rank_reported;
```

Q3. Share of sales by region and mix shift [SUM() OVER]

```
WITH shares AS (
    SELECT fiscal_year,
           segment_name,
           value_eur_m AS net_sales,
           value_eur_m / SUM(value_eur_m) OVER (PARTITION BY fiscal_year) * 100 AS share_pct
    FROM fact_segment_metrics
    WHERE metric = 'net_sales'
      AND source_report_year = 2025
)
SELECT segment_name,
       ROUND(MAX(share_pct) FILTER (WHERE fiscal_year = 2024), 1) AS share_2024_pct,
       ROUND(MAX(share_pct) FILTER (WHERE fiscal_year = 2025), 1) AS share_2025_pct,
       ROUND(MAX(share_pct) FILTER (WHERE fiscal_year = 2025)
           - MAX(share_pct) FILTER (WHERE fiscal_year = 2024), 2) AS shift_pp
FROM shares
GROUP BY segment_name
ORDER BY share_2025_pct DESC;
```

Q4. Euros added vs percentage growth [ORDER BY]

```
WITH sales AS (
    SELECT m.segment_name,
           MAX(m.value_eur_m) FILTER (WHERE m.fiscal_year = 2024) AS sales_2024,
           MAX(m.value_eur_m) FILTER (WHERE m.fiscal_year = 2025) AS sales_2025
    FROM fact_segment_metrics m
    JOIN dim_segment d ON d.segment_name = m.segment_name
    WHERE m.metric = 'net_sales'
      AND m.source_report_year = 2025
      AND d.is_geographic
    GROUP BY m.segment_name
)
SELECT segment_name,
       sales_2024,
